Re: Bellcrank Lever Guard

1100 -  
1300 - Automatics

To reduce the possibility of seizure of the bellcrank lever due to the ingress of road dirt, water etc., a guard has recently been introduced and may be fitted to earlier vehicles.

The guard, being radiused to clear the transmission drain plug may be fitted by removing the two appropriate nuts and washers retaining the converter housing to the transmission case, the guard subsequently being retained by these same nuts and washers.
